Outline

- ◆ An Overview of the Mainland Chinese Economy
- Comparison of the Economies of Hong Kong and the Mainland
- Mainland-Hong Kong Economic Interactions
- Concluding Remarks

- ◆ The Mainland of China has made tremendous progress in its economic development since it began its economic reform and opened to the World in 1978.
- ◆ The Mainland of China is one of the very few socialist economies that have made a smooth and successful transition from a centrally planned economic system to a market economic system without a massive decline in their real GDPs, as were the cases of the former Soviet Union and the formerly socialist countries of Eastern Europe.
- ◆ It is a model for other transition economies such as Vietnam and potential transition economies such as Cuba, Laos, and North Korea.

Lawrence J. Lau

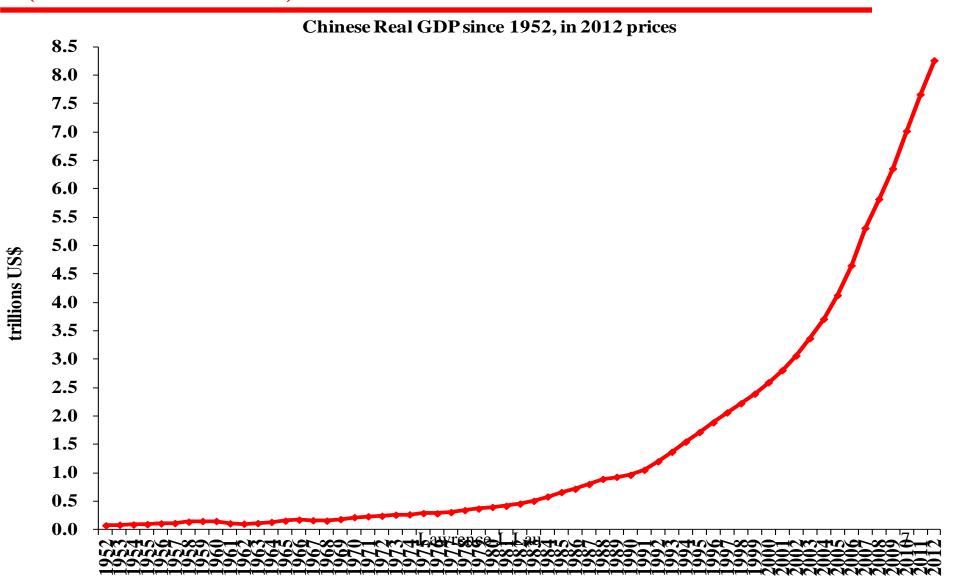

- ◆ A commonly used measure of the size of an economy is GDP, or Gross Domestic Product. It is defined as the **total value of all goods and services produced** within the geographical boundaries of an economy in a given period of time, for example, a year or a quarter. The value of a good or a service is defined as its price less the costs of all the intermediate goods and services used in its production, but not the costs of direct capital and labour services.
- ◆ The pure appreciation in value of an asset, such as a piece of unimproved land, a security, or an antique, is not considered GDP as no new goods are produced and no new services are performed (and as a result no new direct employment is generated).

Lawrence J. Lau

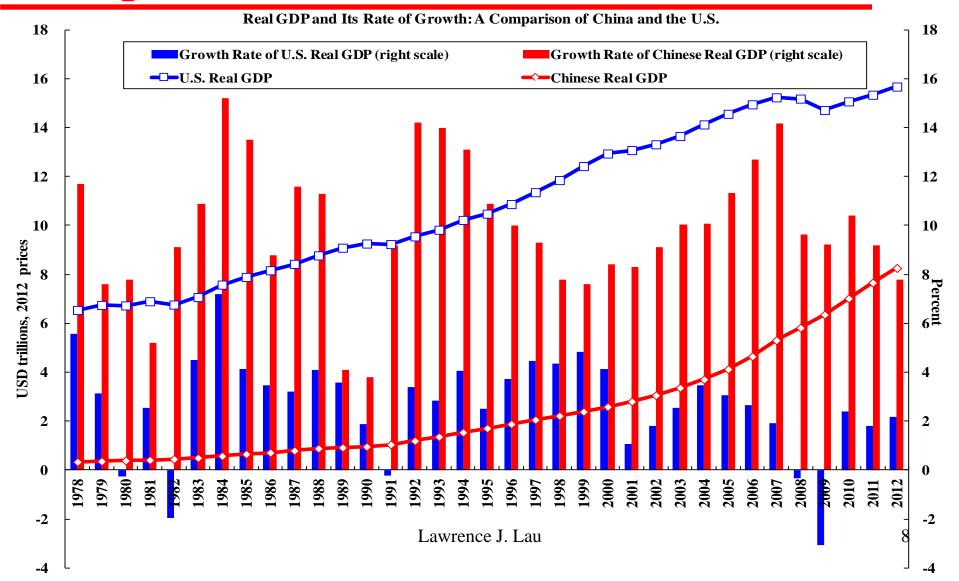

- ◆ Real GDP is a concept used to compare the values of GDP at different points of time that are net of the effects of the changes in the prices of goods and services. A change in the nominal value of GDP due solely to changes in prices is not "real" because in real terms no more goods and services have been produced.
- ◆ Typically, real GDP is measured in terms of the fixed constant prices of a given period. We focus on real GDP because a change in the price of a good or a service, whether up or down, does not affect its utility to consumers.

- ◆ The Mainland is currently the fastest growing economy in the World—averaging 9.8% per annum over the past 35 years (1978-2012). It is historically unprecedented for an economy to grow at such a high rate over such a long period of time.
- ◆ Between 1978 and 2012, Chinese real GDP grew more than 24 times, from US\$341 billion to nearly US\$8.262 trillion (2012 prices), to become the second largest economy in the World, after the U.S.
- ◆ By comparison, the U.S. GDP (approx. US\$15.7 trillion) was slightly less than 2 times Chinese GDP in 2012.
- ◆ Hong Kong GDP in 2012 was only US\$263 billion, or 3.2% of the Mainland GDP.

Mainland China's Share of World GDP, current prices, 1960-present

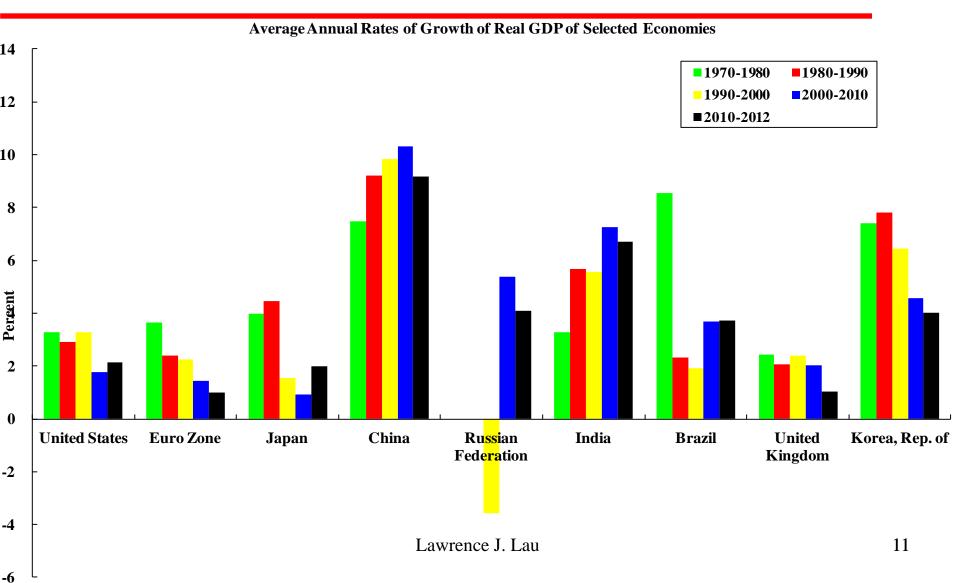

Changing Patterns in the Global Economy: Economic Growth

- ◆ China, India and South Korea are among the fastest growing economies during the past four decades.
- ◆ Russia has also grown at a very high rate during the past decade because of its significant oil production and high oil prices.
- ◆ Brazil has also grown very fast during the past decade because of the world natural resource boom.
- ♦ However, all the developed economies—the U.S., Euro Zone, Japan, and the U.K.—had relatively low and declining growth rates during the past decades. Even though there are now early signs of a steady economic recovery, the rates of growth have remained low by the historical standards of these economies.

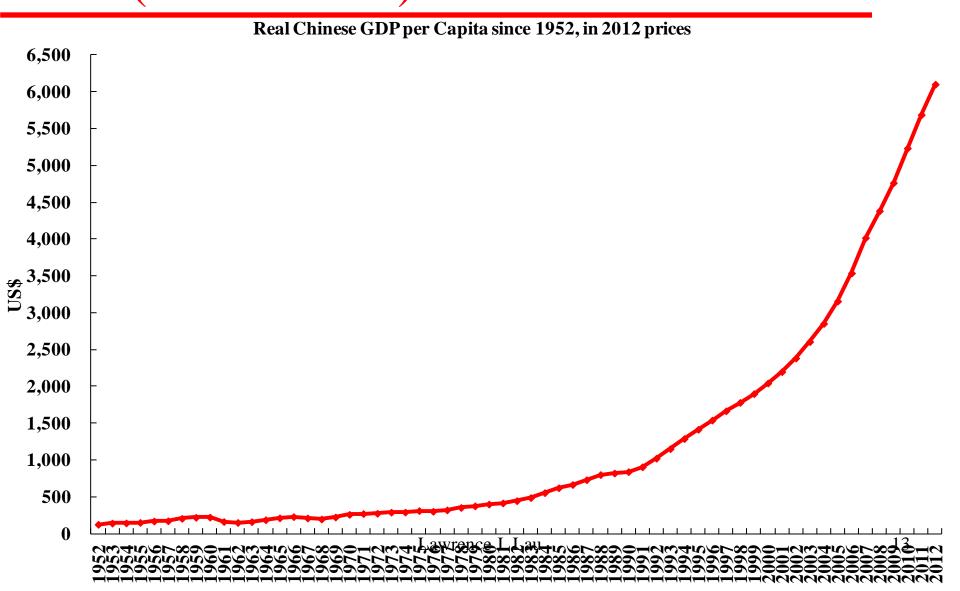

10

Average Annual Rates of Growth of Real GDP of Selected Economies

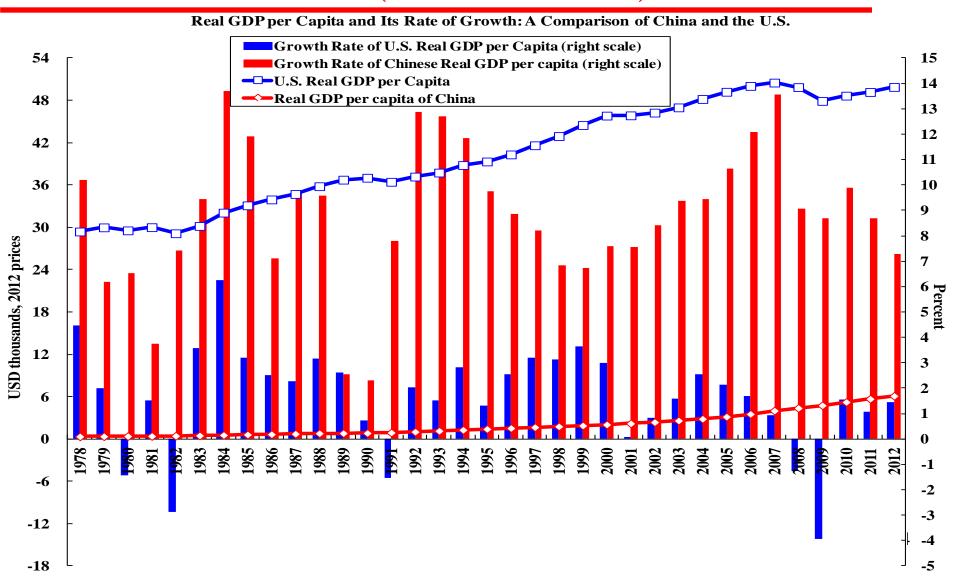

- ◆ Despite its rapid growth, in terms of its real GDP per capita, Mainland China is still a developing economy.
- ◆ Between 1978 and 2012, Chinese real GDP per capita grew 16 times, from US\$354 to US\$6,101.9 (in 2012 prices).
- ◆ By comparison, the U.S. GDP per capita of approximately US\$49,879, was 8.2 times Chinese GDP per capita in 2012.
- ◆ Hong Kong GDP per capita in 2012 was US\$32,742, or 5.4 times the Mainland GDP per capita.
- ◆ Mainland GDP per capita ranks below 90th among all countries in the World.

Real Chinese GDP per Capita in US\$ Since 1952 (2012 Prices)

Changing Patterns in the Global Economy: International Trade

- ◆ The East Asian (defined as the 10 Association of Southeast Asian Nations (ASEAN) + 3 (China, Japan and the Republic of Korea) share of World GDP rose from just above 10% in 1970 to 25% in 1012.
- ◆ Similarly, East Asian share of World trade rose from 9.9% in 1970 to 25.8% in 2012.
- ◆ The Chinese share of World trade rose from 0.7% in 1970 to 10.7% in 2012.
- ◆ Chinese international trade accounted for 41.2% of East Asian international trade in 2012.

An Overview of the Mainland Chinese Economy: The Renminbi

- ◆ The Renminbi was over-valued in 1978. (For quite a few years, Mainland China maintained dual exchange rates and foreign visitors used "Foreign Exchange Certificates" rather than Renminbi.) It devalued continuously until 1994.
- ◆ The dual exchange rates were unified in 1994 when the Renminbi became current-accounts convertible, that is, exporters are free to sell their foreign exchange proceeds for Renminbi and importers are free to purchase foreign exchange with Renminbi to pay for their imports.
- ◆ Since 1994, the Renminbi has been appreciating with respect to the U.S. Dollar, from 8.7 Yuan/US\$ in 1994 to 6.1 Yuan/US\$ today. Lawrence J. Lau 20

Nominal Exchange Rate of the Renminbi, Yuan/US\$, 1978-present

The Nominal and Real Yuan/US\$ Exchange Rates (1994 prices)

• While many problems have arisen in the Chinese economy within the past decade—for example, increasing income disparity (both inter-regional and intra-regional), uneven access to basic education and health care, environmental degradation, inadequate infrastructure and corruption—it is fair to say that every Mainland Chinese citizen has benefitted from the economic reform and opening since 1978, albeit to varying degrees, and few want to return to the central planning days.

◆ The Central Government leaders have also amply demonstrated their ability to confront important challenges and solve difficult problems over the past 35 years, surviving various economic and financial crises such as the 1997-1998 East Asian currency crisis, the 2007-2009 global financial crisis, the European sovereign debt crisis and more recently the anticipated tapering and winding down of QEIII.

- ◆ In the following table, the key performance indicators of the Chinese economy before and after the initiation of the economic reform and opening policy in 1978 are compared. It is readily apparent that there has been a huge improvement in every aspect of the economy—rates of growth of GDP, consumption, and international trade, on both an aggregate and per capita basis—except the average rate of inflation, which has become considerably higher in the period since 1978.
- One important factor for the improvement of the per capita performance indicators is the "one-child policy", which applies to the 94% Han majorityain China, adopted in 1979.

Key Performance Indicators Before and After Chinese Economic Reform

	Growth Rates percent per annum	
	Period I	Period II
	1952-1978	1978-2012
Real GDP	6.15	9.83
Real GDP per Capita	4.06	8.73

Comparison of the Economies of Hong Kong and the Mainland

- ◆ It is useful to compare the economies of Hong Kong and the Mainland over time.
- ◆ Huge changes have occurred over the past 30 odd years.
- ◆ In 1980, the real GDP of the Mainland economy is only 7 times that of Hong Kong. Today, it is 31.4 times (US\$8.26 trillion versus US\$263 billion).
- ◆ However, in terms of real GDP per capita, Hong Kong still leads the Mainland at 5.4 times in 2012 (US\$32,742 versus US\$6,102), but the gap has shrunk significantly from 28 times in 1980.

Comparison of the Economies of Hong Kong and the Mainland

- ◆ In terms of international trade, the Mainland, which started out at a very low level in 1978, reached approximately the same level as Hong Kong in the early 1990s. This is because the bulk of the Mainland international trade, whether exports or imports, was trans-shipped through Hong Kong. Hong Kong's domestic exports and imports, by comparison, were quite low.
- ◆ However, since the Mainland acceded to the World Trade Organisation (WTO) in 2000, direct Mainland international trade grew rapidly and total Mainland trade is now approximately 4 times as large as Hong Kong's.

 Lawrence J. Lau

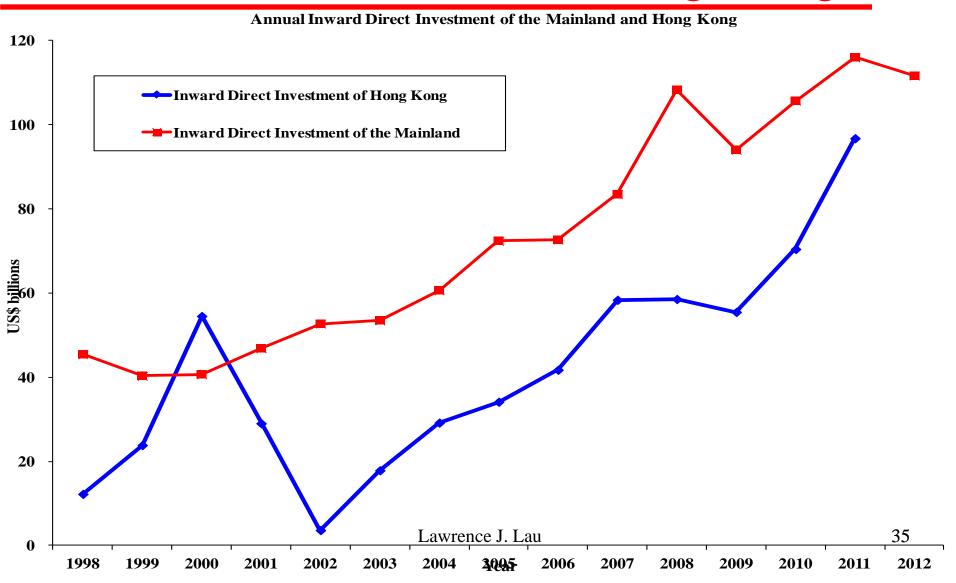

Comparison of the Total International Trade of the Mainland and Hong Kong

Comparison of the Economies of Hong Kong and the Mainland

◆ In terms of foreign direct investment (FDI), the Mainland has consistently attracted more direct investment than Hong Kong since it adopted the economic reform and opening policies in 1978.

Comparison of the Inbound Foreign Direct Investment: Mainland and Hong Kong

Mainland-Hong Kong Economic Interactions: International Trade

- ◆ Hong Kong was effectively the only gateway to the Mainland for international trade and direct investment when China begin its economic reform and opened to the World in 1978.
- ♦ Most of the early international trade between the Mainland and the rest of the World was routed through Hong Kong. Hong Kong provided the financing, logistics and port facilities for the trade. Later on, the Mainland developed its own facilities at Shanghai, Shenzhen and other ports.
- ◆ Trade between Hong Kong and the Mainland has grown rapidly since 1978, with most of it being re-exports from and to the Mainland. Re-exports still constitute the major proportion of total Hong Kong exports today.

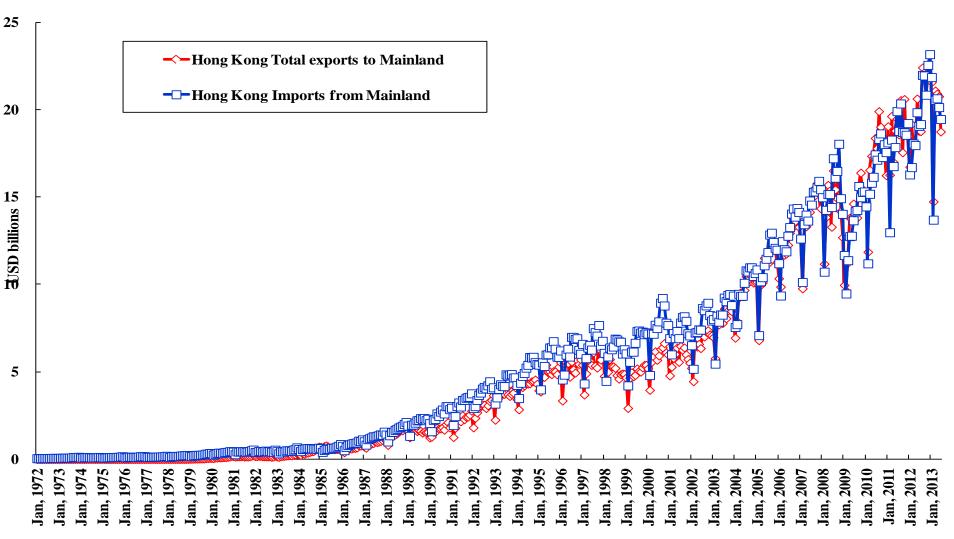

Mainland-Hong Kong Economic Interactions: International Trade

- ◆ The Mainland has become the most important trading partner of Hong Kong. It is the most important destination for Hong Kong exports as well as the most important source of Hong Kong imports, accounting for approximately 50% of both in 2012.
- ◆ The Mainland has recently become even more important to the Hong Kong economy because of the economic problems in the United States and Europe since 2008.
- ◆ The advances in information and communication technology and globalisation have also meant that all jobs that can be moved away to a lower-cost location will be moved away. This has happened to the U.S., Japan,

 Taiwan, Hong Kong and even the Mainland.

Total Hong Kong Exports to and Imports from the Mainland since 1972

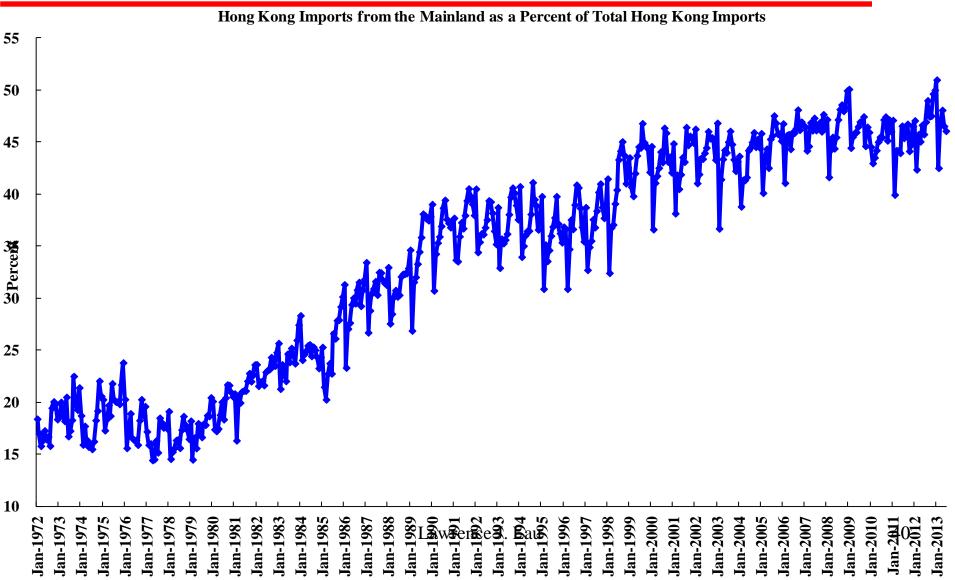

Total Hong Kong Exports to and Imports from the Mainland since 1972

Hong Kong Exports to the Mainland as a Percent of Total Hong Kong Exports

Hong Kong Imports from the Mainland as a Percent of Total Hong Kong Imports

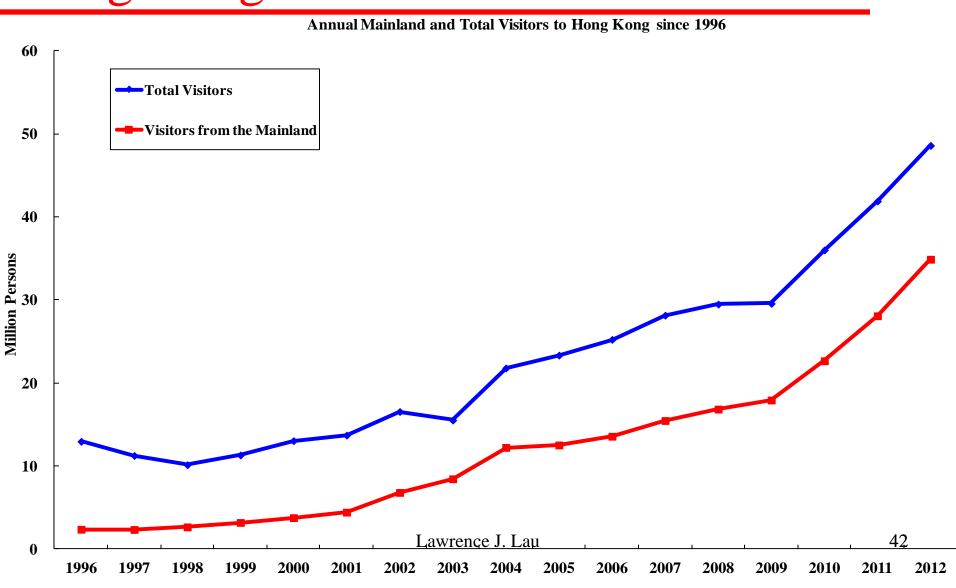

Mainland-Hong Kong Economic Interactions: International Trade

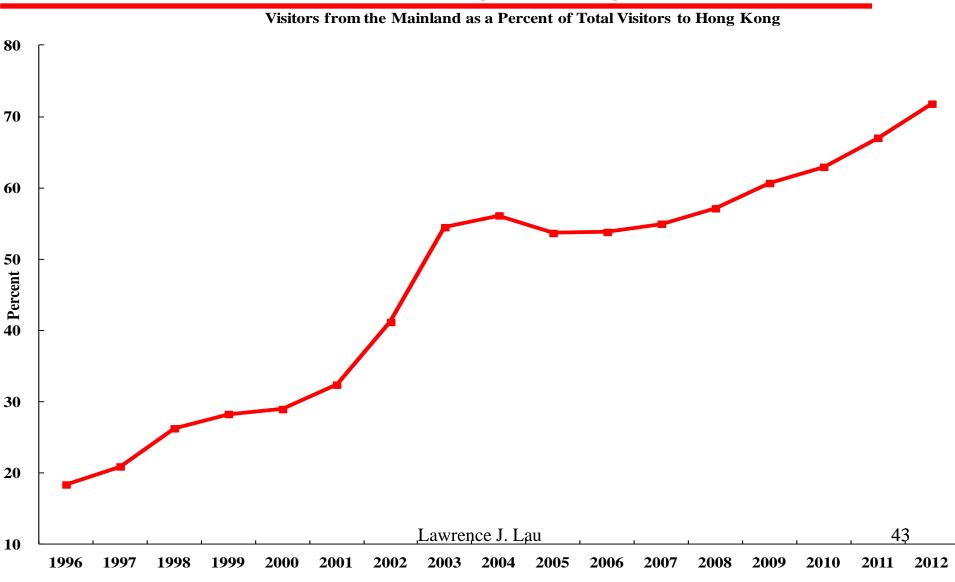

- ◆ The Mainland has also become the most important source of visitors to Hong Kong, especially since the introduction of the "Individual Visit Scheme" in 2003. Mainland visitors constituted 71.8% of all visitors to Hong Kong in 2012. Mainland visitors spend on average 3 days in Hong Kong and US\$750 per day.
- ◆ The total number of visitors from the Mainland to Hong Kong is currently running at the rate of approximately 40 million a year, not including day visitors.
- ◆ These visitors generate demands for hotels, restaurants, retail, and transportation and through these demands create many job opportunities that cannot be moved away. It is fair to say that without the Mainland visitors, the unemployment rate in Hong Kong would have been at least two percentage points higher.

Lawrence J. Lau

Annual Mainland and Total Visitors to Hong Kong since 1996

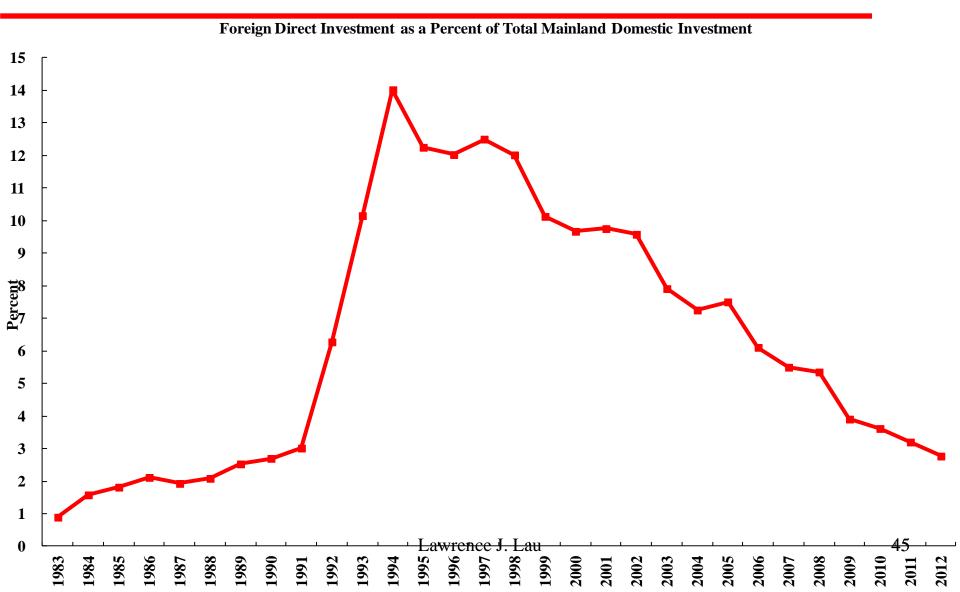

Visitors from the Mainland as a Percent of Total Visitors to Hong Kong

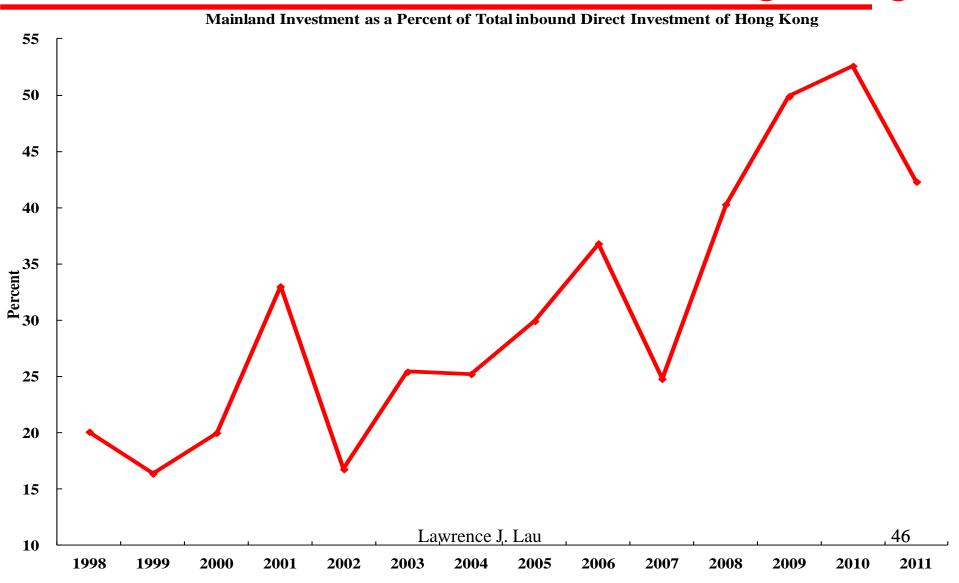

Mainland-Hong Kong Economic Interactions: Direct Investment

- ◆ Hong Kong investors were the first to invest in the Mainland when it first opened to the World in 1978 and were instrumental for the successful development of the Special Economic Zones such as Shenzhen.
- ◆ It is fair to say that without Hong Kong, Shenzhen would probably not have been as successful. The other Special Economic Zones (Shantou, Zhuhai, Xiamen and the entire island province of Hainan) have not been notably successful.
- ◆ But today, even total foreign direct investment, from all sources, constitutes only a very small and quantitatively unimportant percentage of total gross domestic investment on the Mainland (less than 5% in 2012).
- Mainland investment now constitutes almost 50% of all FDI into Hong Kong.
 Lawrence J. Lau
 44

Foreign Direct Investment as a Percent of Total Mainland Domestic Investment

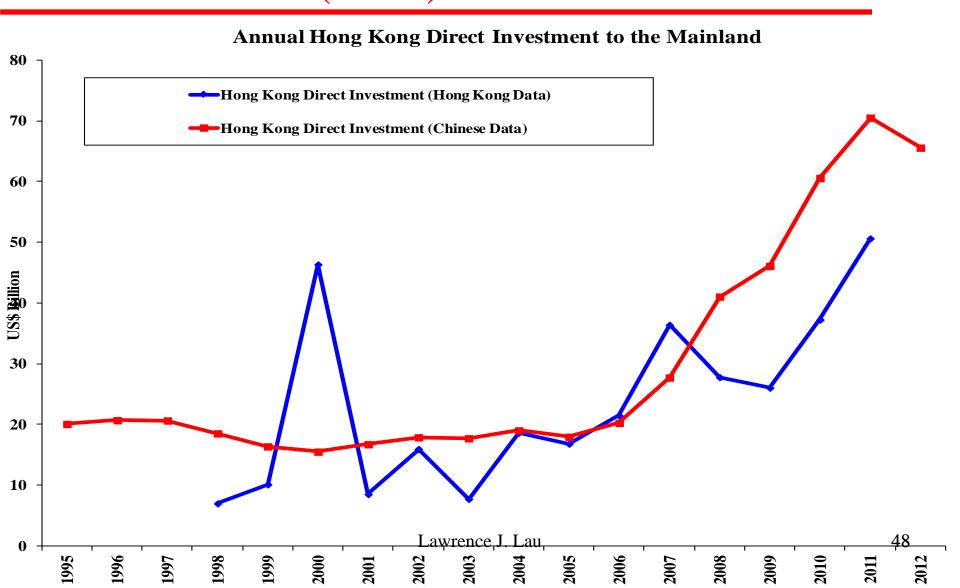

Mainland Investment as a Percent of Total Inbound Direct Investment of Hong Kong

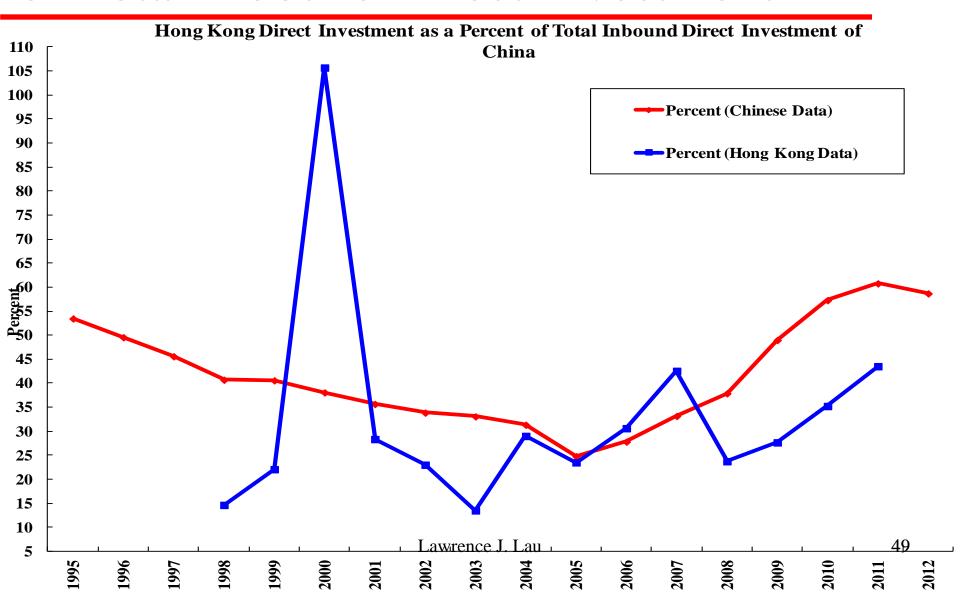

Mainland-Hong Kong Economic Interactions: Direct Investment

- ◆ Hong Kong data on direct investment by country or region of origin are not completely reliable. On the one hand, Hong Kong direct investment can include not only investment from Hong Kong firms and residents, but also investment from Taiwan and elsewhere routed through Hong Kong subsidiaries, taking advantage of the Closer Economic Partnership Agreement (CEPA) between the Mainland and Hong Kong, as well as round-tripped investment, that is, investment from Mainland firms and residents camouflaged as Hong Kong firms in order to enjoy certain special tariff and tax privileges.
- ◆ On the other hand, there is also Hong Kong direct investment that is routed through tax havens such as the British Virgin Islands, Cayman Islands and Netherland Antilles and hence is not counted as Hong Kong investment.
- ♦ Hong Kong data and Mainland data on FDI do not agree. Taking into consideration all of these data problems, Hong Kong is still the most important source of foreign direct investment into the Mainland, accounting for between 20% and 40% of total FDI.

Annual Hong Kong Direct Investment to the Mainland (US\$)

Hong Kong Direct Investment as a Percent of Total Inbound Direct Investment

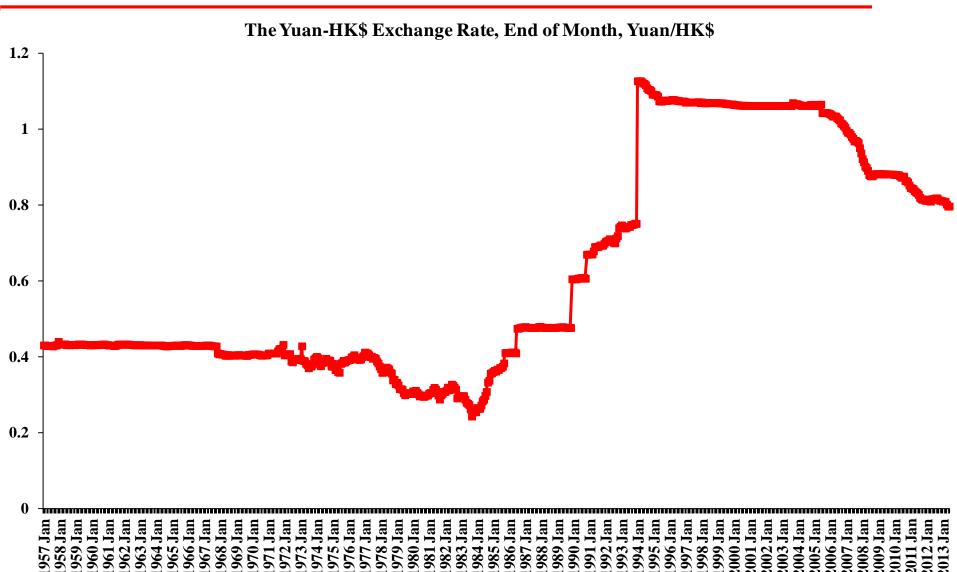

The Yuan-Hong Kong Dollar Exchange Rate

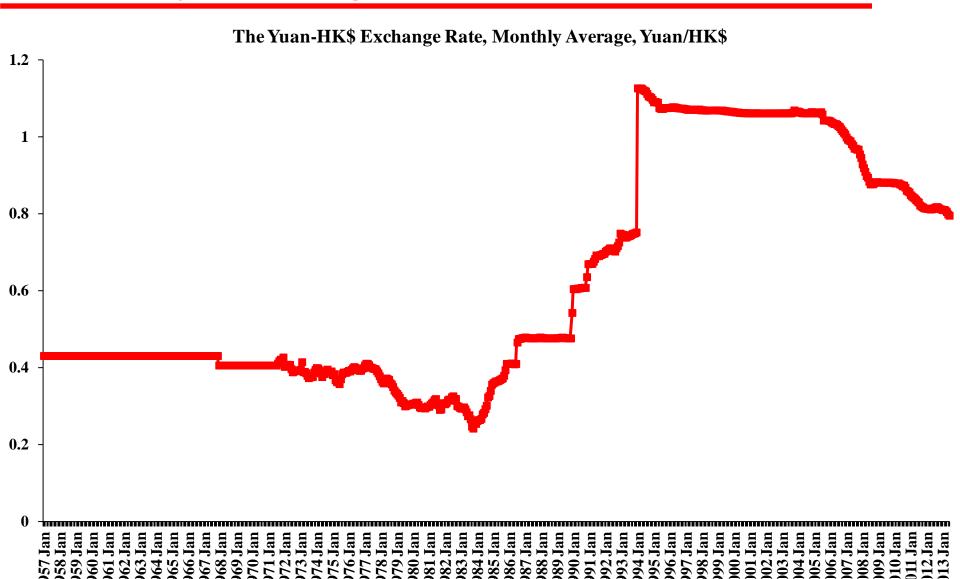

- ◆ The Yuan-Hong Kong Dollar exchange rate also reflected the relative fortunes of the Mainland and Hong Kong economies. The Hong Kong Dollar was worth slightly more than 0.4 Yuan/HK\$ in 1957, fell to a low of less than 0.3 Yuan/HK\$ in 1984, and rose to a peak of 1.12 Yuan/HK\$ in 1994, when the Yuan became current accounts convertible. The Hong Kong Dollar then remained higher than the Yuan, until the Yuan began to appreciate in mid-2005. The Hong Kong Dollar is now worth slightly less than 0.80 Yuan/HK\$.
- ◆ In the foreseeable future, the Yuan is not expected to devalue vis-a-vis the U.S. Dollar and hence the Hong Kong Dollar as long as the linked exchange rate system of Hong Kong remains unchanged. It may continue to appreciate relative to the U.S. Dollar, but the degree of appreciation will likely be small.

Lawrence J. Lau

The Yuan-HK\$ Exchange Rate End of Month, Yuan/HK\$

The Yuan-HK\$ Exchange Rate Monthly Average, Yuan/HK\$

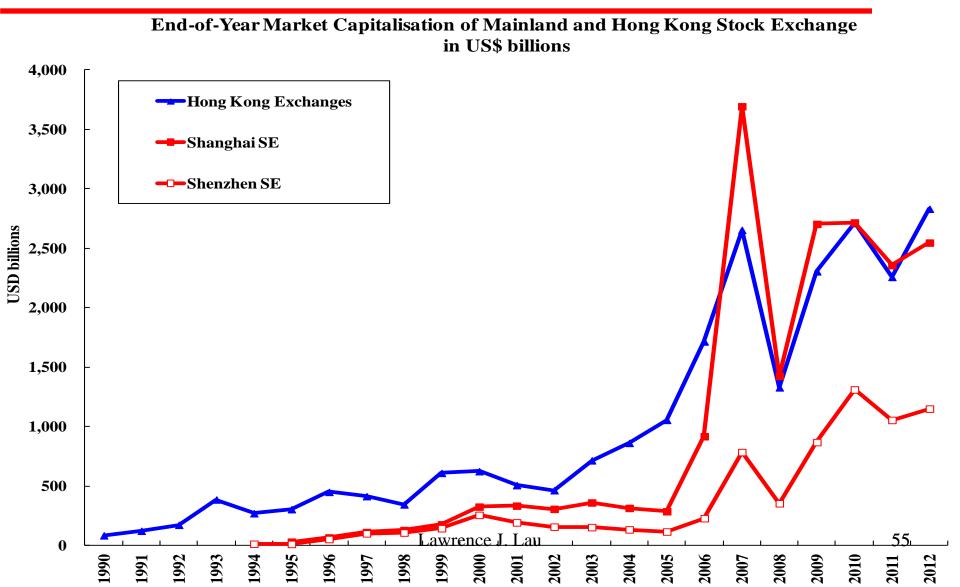

Mainland-Hong Kong Economic Interactions: The Stock Market

- ◆ Stock exchanges on the Mainland were first established in the early 1990s, much later than the Hong Kong Stock Exchange. However, in terms of total market capitalisation—the total value of all the companies listed on the stock exchange at the prevailing share prices of the market—the Shanghai Stock Exchange alone is now comparable to the Hong Kong Stock Exchange. The Shanghai and Shenzhen Stock Exchanges combined have a total market capitalisation that exceeds Hong Kong's.
- ◆ Mainland firms now constitute more than 50% of the Hong Kong Stock Exchange by market capitalisation but less than 20% by the number of listed firms—indicating that the Mainland firms listed on the Hong Kong Stock Exchange are on average much bigger than the other firms listed there.

Mainland-Hong Kong Economic Interactions: The Stock Market

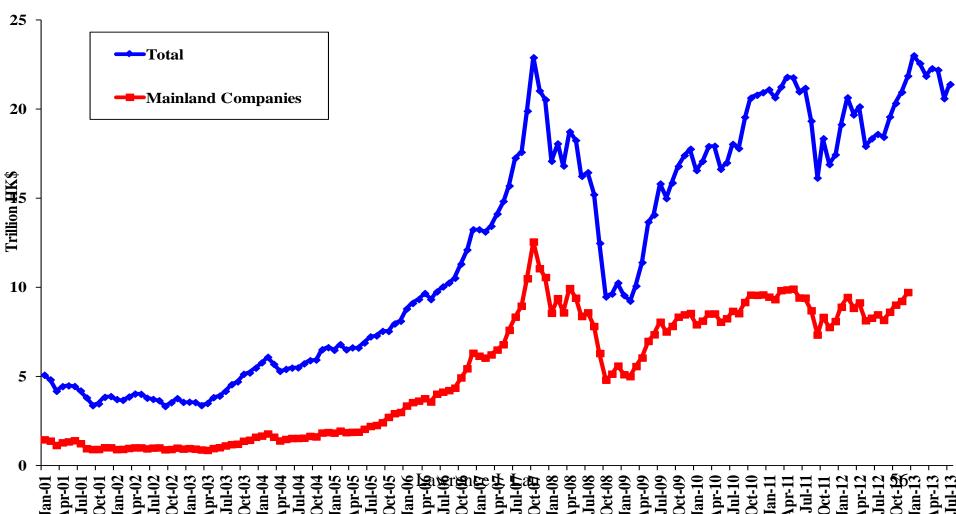

♦ However, the Hong Kong Stock Exchange was also instrumental in attracting foreign portfolio investors to invest in the shares of Mainland Chinese enterprises at the start of the Mainland stock exchanges in the early 1990s through the listing of their shares as H-shares. The Hong Kong Stock Exchange provided the easy access, the liquidity and the strict regulation expected by the foreign portfolio investors. Listing of Mainland enterprises on the Hong Kong Stock Exchange also helped to bring in foreign exchange, which was needed by Mainland enterprises at the time.

Comparison of Market Capitalisations of Mainland and Hong Kong Stock Exchanges

Market Capitalisation of Mainland and All Firms Listed on Hong Kong Stock Exchange, HK\$ trillions

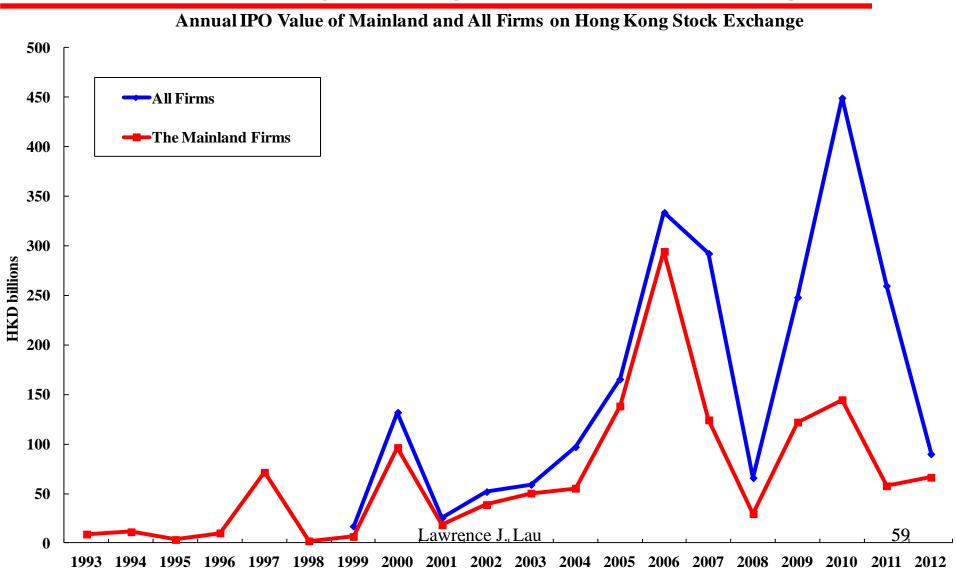

Year-End Market Capitalisation of Mainland and All Firms Listed on HKSE

Mainland-Hong Kong Economic Interactions: The Stock Market

- ◆ In terms of initial public offerings (IPOs), that is, the first-time sales of shares by firms to public investors on the stock exchange, Mainland firms have been the mainstay of the Hong Kong Stock Exchange, accounting for most of the value of its IPOs, except in the global financial crisis years of 2009-2011 when firms from other countries came to Hong Kong to raise money because of the lack of activities in New York and London.
- ◆ Increasingly, however, Mainland enterprises find listing on the Shanghai Stock Exchange much more attractive because there is substantial domestic investor demand and the enterprises need to raise Renminbi rather than foreign exchange. The Mainland, with foreign exchange reserves exceeding US\$3.5 trillion, does not need any more inflow of foreign exchange. Moreover, funds raised offshore cannot be automatically remitted to the Mainland for use on the Mainland. Specific approval from the People's Bank of China is required.
- ◆ That is also why Hong Kong has to seek firms from other countries and regions to list their shares on the Hong Kong Stock Exchange 58

Annual IPO Value of Mainland and All Firms on Hong Kong Stock Exchange

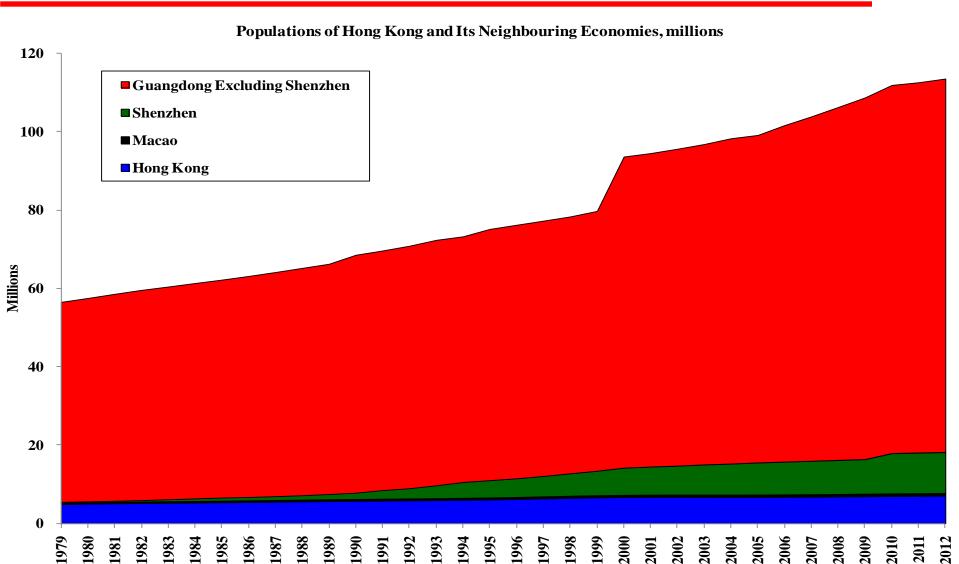

Mainland-Hong Kong Economic Interactions

- ♦ Hong Kong and its entrepreneurs were indispensable for the success of the economic reform and open-door policy on the Mainland, and in Guangdong and Shenzhen in particular.
- ◆ Hong Kong may not be the only gateway to the Mainland for international trade and investment any more, but it can be the best gateway, or at least the best gateway to southern China.
- ♦ Hong Kong should capitalise on its geographical position to co-operate closely with Shenzhen, Pearl River Delta, Guangdong and southern China.
- ◆ Hong Kong can compete effectively with Shanghai as an international financial centre only if Hong Kong becomes more closely integrated economically with Guangdong (including Shenzhen).
- Guangdong, Hong Kong and Macau together can potentially become an economy as large as that of Japan today.

Economic Cooperation between Hong Kong and Guangdong

- ◆ The Province of Guangdong, including Shenzhen, has a population of 105.94 million, and is the most populous province on the Mainland.
- ◆ If the populations of Hong Kong (7.15 million) and Macau (0.56 million) are added to that of Guangdong, the total population becomes 113.65 million, more than that of Germany (82 million) and almost equal to that of Japan (128 million).

Populations of Hong Kong and Its Neighbouring Economies, millions

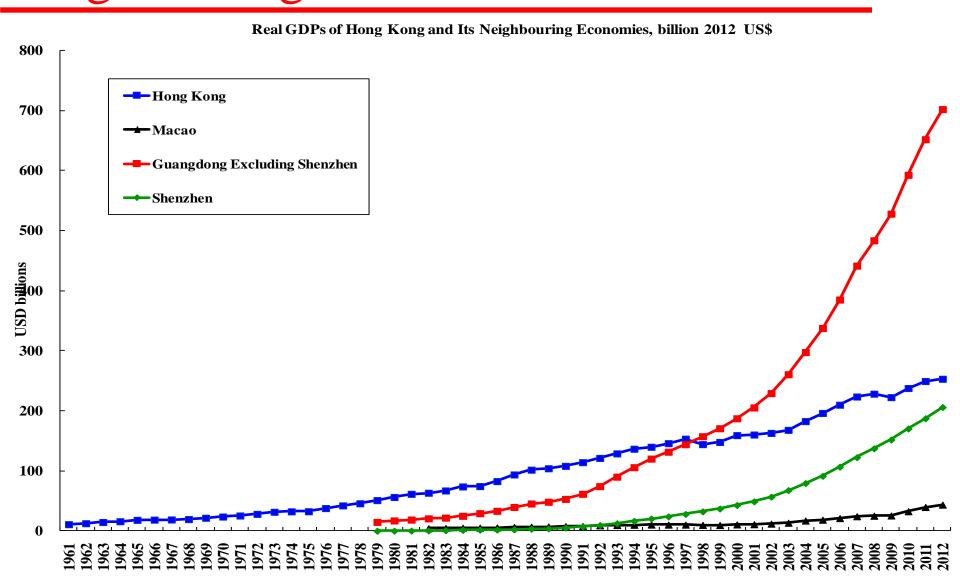

Economic Cooperation between Hong Kong and Guangdong

- ◆ The GDP of the Province of Guangdong, including Shenzhen, was US\$908 billion in 2012, 3.6 times the Hong Kong GDP of US\$263 billion. It is also the province with the largest GDP on the Mainland, constituting 11% of the Mainland GDP. The GDP of Guangdong and Hong Kong combined was US\$1.171 trillion in 2012, about 1/7th of the Chinese GDP.
- ◆ The GDP per capita of the Province of Guangdong in 2012 was US\$7,988, compared to Hong Kong's US\$32,742. The GDP per capita of the combined region was US\$10,600.
- ◆ Thus, together, there is a huge consumer market with ample labour force, and the region has the potential of eventually surpassing Japan to become the third largest economy in the World.

 **Thus, together, there is a huge consumer market with ample labour force, and the region has the potential of eventually surpassing Japan to become the third largest economy in the World.

The Comparative Advantages of Hong Kong

- ◆ A tradition of capitalist free market economy—the flows of people, goods and capital into and out of Hong Kong have always been free and open.
- ◆ A cosmopolitan international metropolis that is bilingual (Chinese and English) and bicultural, and closely connected to both China and the rest of the World
- Stable exchange rate, freely convertible currency, full capital mobility and free trade
- ◆ A well-developed financial market with close links to the other international financial centres
- ◆ Low corporate and individual income tax rates
- ◆ Rule of law, effective regulation and supervision of financial markets, transparent governance, and civil liberties comparable to the most developed countries in the World
- An environment hospitable to entrepreneurs and potential entrepreneurs

The Comparative Advantages of Hong Kong

- ◆ The favourable commercial reputations of Hong Kong and its firms
- ◆ Academic freedom, freedom of speech and real-time full access to information everywhere—the internet is entirely open and the press is among the freest in the World
- ◆ A well-educated and experienced professional labour force
- ♦ World-class, research-oriented universities
- ◆ Geographically well located--proximity to the Mainland, a huge market and a huge source of savings, and right at the junction between the Mainland China and the emerging ASEAN region

The Comparative Vulnerabilities of Hong Kong

- High cost structure for both local and international businesses, especially the cost of land (and hence the costs of office space and housing)
- ◆ The lack of a large domestic market
- ◆ A narrow tax base, and over-dependence of government revenue on land sales, resulting in its excessive volatility and also high and rising land prices
- ◆ The lack of double-tax agreements (DTAs) with many countries and regions (a problem that is in the process of being corrected)
- ◆ Insufficient support for higher education and for R&D, hindering Hong Kong's transformation into an innovationbased economy 68

Lawrence J. Lau

The Comparative Vulnerabilities of Hong Kong

- ◆ Local protectionism of many service professions such as the legal and the medical
- Declining English proficiency and an increasingly inwardlooking mentality
- Lack of a long-term plan and strategy
- ◆ Lack of unity of purpose (and a sense of urgency)

- ◆ Hong Kong will within the next ten years lose its advantage of the Hong Kong Dollar over the Renminbi as a convertible currency—the Renminbi is certain to become capital accounts convertible during this period (perhaps with some residual controls over short-term capital inflows); and when it does, it will substantially displace and replace the Hong Kong Dollar both as a medium of exchange and as a store of value even as the Hong Kong Dollar remains the legal tender as provided in the Basic Law.
- ◆ Paradoxically, the rising acceptance and use of the Renminbi, including its eventual full convertibility, can be a great opportunity for Hong Kong as a centre for Renminbi-denominated financing. That is why the ability to conduct domestic and international transactions and hence to clear and settle in Renminbi is so important for Hong Kong.

 Lawrence J. Lau 70

- ◆ Hong Kong will also lose much of its advantage of a free trade port/low tariff on account of Chinese accession to the WTO. In any case, growth of Chinese exports and imports will slow as the Mainland economy further reorients itself to its own huge domestic market. Hong Kong will therefore have to rely on its other comparative advantages.
- ◆ The Mainland will catch up quickly on Hong Kong's comparative advantage in human capital as its economy continues to be globalised, its institutions of higher learning continue to improve, and the use of English becomes more and more common, at least in its major cities.

 Lawrence J. Lau

71

- ◆ Hong Kong can also be a springboard for outbound Chinese direct investment because of its international links and highly developed service sector. It can provide the necessary accounting, legal and other services and the infrastructural support for Chinese enterprises investing abroad (through Hong Kong subsidiaries).
- ◆ The Hong Kong capital market can also provide Chinese enterprises the ability to use "natural" hedges for their outbound foreign direct investments (by, say borrowing the foreign currency in Hong Kong to fund the outbound investment thus balancing the foreign-currency assets with foreign-currency liabilities).
- ◆ In the transition, policy support from the Hong Kong SAR Government is crucial (e.g., concluding double-tax agreements with foreign tax jurisdictions).

Mainland-Hong Kong Economic Interactions

 Guangdong has a diversified industrial base—with light industry, heavy industry and high-technology industries. but is relatively weak in the higher education and research and development sectors. Hong Kong has little or no industry, especially high-technology industry, but has world-class research universities to provide scientific and technological manpower and R&D. There is therefore room for specialisation and division of labor between Hong Kong and Guangdong, which can be win-win for all.

◆ If Hong Kong were to become an international financial centre for China, it must begin by trying to provide the firms and households in its potential hinterland with the best financial service possible, so that they do not need to go to Shanghai or develop their own international financial centre(s). If Hong Kong cannot hold on to these potential customers, it can never compete with Shanghai.

- ◆ It is because of the strength of the Mainland economy that Hong Kong has been able to survive the current European sovereign debt crisis as well as the earlier 2007-2009 global financial crisis and the 1997-1998 East Asian currency crisis relatively unscathed.
- ◆ The "Individual Visit Scheme" has been instrumental in lowering the unemployment rate of Hong Kong down to its current 3.2%.

- ◆ Hong Kong was indispensable to the initial success of the Mainland's economic reform and opening to the World.
- ◆ However, with the success of the Mainland economy, the fate of the Hong Kong economy is now inextricably intertwined with that of the Mainland. The Mainland is now critically important to the Hong Kong economy. If the Mainland economy prospers, the Hong Kong economy will prosper. If the Mainland economy slows, the Hong Kong economy will slow.

- ◆ The economies of Hong Kong and Guangdong are complementary to each other. What Hong Kong lacks, Guangdong can provide; and vice versa. Their economic cooperation can be win-win; it can benefit both places.
- ◆ Hong Kong should therefore intensify its economic cooperation with Guangdong (and Shenzhen). Guangdong is Hong Kong's natural economic hinterland. Hong Kong cannot compete with Shanghai if it is unable to hold on to Guangdong.

- ◆ It is necessary to promote the freer flow of goods and services between Guangdong and Hong Kong. There should be a pilot programme for a Guangdong-Hong Kong Pilot Free Trade Zone.
- ◆ It is also necessary to promote the freer flow of people—the simplification of entry/exit and customs formalities, the mutual selective recognition of academic degrees and professional qualifications between Guangdong and Hong Kong.
- ◆ Finally, it is necessary to promote the financial cooperation between Guangdong and Hong Kong and to facilitate the cross-border flow of capital once J. Lau 78
